Reviews

The book is great and fantastic. It is written in straightforward words and phrases rather than difficult to understand. You won't really feel monotony at any time of your respective time (that's what catalogues are for regarding should you question me).

To intensify: Make a solution of mercuric chloride, 300 grains in 10 ounces of water, and add dram of hydrochloric acid. Bleach in this solution and blacken in a solution of strong ammonia water, 20 drops; water one ounce. Allied to fog, in the eccentricity of its neven incidence, is the defect known as uneven density: that is, the reduced silver appears in irregular patches of varying thicknesses. A thin end, side, or corner of a negative may be caused by the unevenness of the sensitive emulsion; patches of less density may be due to the quantity of the developer used being too small; or by the dish not being properly level; or by carelessness in pouring on the developer, the thinner parts being places which were only partly covered by the developer and therefore less reduced. The solution acts in uneven waves and gives different degrees of density, so that the parts which the solution has not touched will be clear gelatine and the other parts will be more or less opaque. To remedy this defect of uneven density is out of the question; to prevent it, use a sufficient quantity of developing solution, rock the dish steadily and see that all parts of the plate, or film, are simultaneously covered by it. So far, the defects referred to have been general in their nature. Introductory generalities serve, as a rule, the good office of indicating comprehensively familiar pitfalls and...
