The general text-books on dyeing devote little space to this particular side of the question. They deal with the operations of the dye-house, rather than with the principles which seem to govern the actual practice of this branch of industry. It is advisable that the modern dyer should have some knowledge of the general reactions, which give rise to the results obtained in the many processes, involved in the dyeing, and bleaching of textile fibres. Without some such knowledge, it is difficult to appreciate their nature; or be in a position to control their working in a systematic manner. To obtain this under present conditions, it is necessary to make a more, or less, tedious search over the scientific and technical journals of the last thirty years. This same difficulty presents itself to the student, who wishes to engage in research on this interesting, but little understood subject. It is, perhaps, equally difficult for the dyer to obtain information of those branches of physical science, which will possibly give an explanation of many of the mordanting and dyeing operations met with in daily practice.
