

# Communications Acquisition: Army Still Needs to Determine Battlefield Communications Capability: Nsiad-93-33

By -

BiblioGov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 36 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. Pursuant to a congressional request, GAO reviewed the Army's efforts to ensure that three communication systems provide the required communications capabilities for the Army Tactical Command and Control System (ATCCS). GAO noted that: (1) the three communication systems would have the capabilities to meet the workload generated by the ATCCS component system; and (2) the Army's analyses of the component systems contained deficiencies that prevented it from ensuring that the communications systems provided adequate support for ATCCS. GAO found that the Army: (1) did not use the appropriate foreign threat scenario to analyze the workload; (2) used outdated information to analyze user communication requirements; (3) failed to consider human error and radio interference; and (4) failed to comply with independent verification, validation, and accreditation requirements. GAO also found that the Army's review of its requirements and communications support needed for ATCCS could change because of the reduced Soviet threat, the down-sizing of the U. S. military, and changes in combat doctrine. This item ships from La Vergne, TN. Paperback.

### Reviews

*This composed book is great. It is actually loaded with wisdom and knowledge. It is extremely difficult to leave it before concluding, once you begin to read the book.*

-- **Lucious McDermott**

*The publication is fantastic and great. It can be really exciting through reading period of time. I am just very happy to inform you that this is the greatest publication I actually have read in my very own daily life and could be the very best ebook for at any time.*
