REGRESSION MODELS FOR CATEGORICAL DEPENDENT VARIABLES USING STATA (3RD REVISED EDITION)

Stata Press. Paperback. Book Condition: new. BRAND NEW, Regression Models for Categorical Dependent Variables Using Stata (3rd Revised edition), J. Scott Long, Jeremy Freese, Regression Models for Categorical Dependent Variables Using Stata, Third Edition shows how to use Stata to fit and interpret regression models for categorical data. The third edition is a complete rewrite of the book. Factor variables and the margins command changed how the effects of variables can be estimated and interpreted. In addition, the authors' views on interpretation have evolved. The changes to Stata and to the authors' views inspired the authors to completely rewrite their popular *SPost* commands to take advantage of the power of the margins command and the flexibility of factor-variable notation. The new edition will interest readers of a previous edition as well as new readers. Even though about 150 pages of appendixes were removed, the third edition is about 60 pages longer than the second. Although regression models for categorical dependent variables are common, few texts explain how to interpret such models; this text fills the void. With the book, Long and Freese provide a suite of commands for model interpretation, hypothesis testing, and model diagnostics. The new commands that accompany the third edition make it easy to include powers or interactions of covariates in regression models and work seamlessly with models estimated with complex survey data. The authors' new commands greatly simplify the use of margins, in the same way that the *marginsplot* command harnesses the power of margins for plotting predictions. The authors discuss how to use margins and their new *mchange*, *mtable*, and *mgen* commands to compute tables and to plot predictions. They also discuss how to use these commands to estimate marginal effects, averaged either over the sample or at fixed values of the regressors. The authors...
